Priority

1. ☒ This report has been established as if no priority had been claimed due to the failure to furnish within the prescribed time limit the requested:
- ☒ copy of the earlier application whose priority has been claimed (Rule 66.7(a)).
- ☐ translation of the earlier application whose priority has been claimed (Rule 66.7(b)).
2. ☐ This report has been established as if no priority had been claimed due to the fact that the priority claim has been found invalid (Rule 64.1). Thus for the purposes of this report, the international filing date indicated above is considered to be the relevant date.

<b>2. Novelty (PCT Article 33(2))</b>			
<p>The present invention and citations D1-D5 relate to a method for producing an alkene oxide by the catalytic reaction of an alkene with hydroperoxides. The method as per the application differs from the cited prior art fundamentally in the following steps: (i) providing a current S1 containing compressed liquid alkene; (ii) depressurising at least part of the current S1 by absorbing heat and with at least partial evaporation of the liquid alkene.</p> <p>The subject matter of claims 1-10 can therefore be deemed novel.</p>			
<b>3. Inventive step (PCT Article 33(3))</b>

alkene oxides.

**3.2** Documents D1-D5, which can be deemed the closest prior art, disclose methods for producing alkene oxides. D1-D5 do not disclose the aforementioned steps (i) and (ii). The advantage of the method as per the invention is that the energy introduced in the method is contained and at least partially used, In contrast thereto, as per standard methods, prior to the reaction to form the corresponding alkene oxide, the liquid alkene is mixed into a solvent that is used for the reaction, and the energy contained in the compressed alkene is thus lost. Consequently, the present invention brings about an improved method. An inventive step can therefore be acknowledged.
